

The new ELTECH range of adhesive rolls and pads for web cleaning and contaminate removal

- Material components, processing and finished products will remain constant – Guaranteed.

The individual components and process specifications have been refined over the past 10 years to ensure the product delivers the most effective cleaning on the market.

Paper

Paper tested and pre-selected for thickness, consistency and profile. The paper is coated for moisture stability and the controlled release on one side ensures a smooth unwind.

Adhesive

The adhesive is compatible with all known rubber rollers. Highest adhesive coat weight of all brands tested (50% more adhesive than the competition). The level of tack is controlled within narrow limits. This, coupled with the adhesive coat weight is designed to constantly ensure an effective 'clean wipe' and to offer the maximum 'reservoir' for absorbing contamination.

Wind Quality

The consistent calliper of base material is matched by precisely controlled heavy coating of adhesive. The final rolls are wound to an even tension, which provides full contact with the rubber rollers.

Material Traceability

Each individual roll is identified with the 'Creative Reference' which provides full traceability of materials back to the original raw material and production dates.

The Products

Adhesive Rolls

76mm (3") i.d. core	Widths from 120mm to 1500mm	23m (70 wraps) per roll
150mm (6") i.d. core	Widths from 120mm to 1500mm	47m (70 wraps) per roll

Adhesive Pads – SCA

175mm x 240mm	50 sheets per	5 pads per box
